

SUPERSTORE SALES ANALYSIS

PREPARED BY :
OSALOBO EGHOSA
DATA ANALYST

Dataset Overview

Dataset Name: Superstore Sales Dataset

Dataset Size: 9,995 Rows and 21 Columns

Key Data Fields:

- Order Date
- Ship Date
- Customer Name
- Region
- Category
- Sub-Category
- Sales
- Quantity
- Discount
- Profit

Data Preparation Performed:

- Cleaned column names
- Checked missing values
- Verified data types
- Formatted date columns
- Validated numeric measures
- Created Date Table for time intelligence

Tools Used:

- Microsoft Power BI
- Power Query Editor
- DAX (Data Analysis Expressions)

Business Problem

Business Problem

Statement

The business needed a way to:

- Identify underperforming products
- Monitor sales and profit performance
- Analyze regional sales trends
- Understand the impact of discounts on profitability
- Track down business growth over time.

Key Questions Addressed

1. Which region generates the most profit?
2. Which category performs best?
3. Which products are underperforming?
4. How do discounts affect profit?
5. What are the yearly sales trends?

Goal: Create an interactive dashboard that supports data-driven decision-making for business stakeholders and non-technical stakeholders.

Key Performance Indicators

Dashboard KPIs

- Total Revenue: \$2.3M
- Total Profit: \$286.40K
- Total Orders: 5,009
- Profit Margin: 12.47%
- Total Quantity Sold: 37.87K
- Average Discount: 15.62%

DAX Measures Used

- SUM()
- DISTINCTCOUNT()
- AVERAGE()
- DIVIDE()
- DATEADD()

Purpose Of KPIs

- Measure business performance
- Monitor Sales growth
- Track profitability
- Evaluate operational efficiency

Key Business Insights

Sales & Profitability

- The west region generated the highest sales and profit
- The south region generated the lowest sales performance
- Technology was the best performing category
- Some furniture products generated low or negative profit
- Sales increased significantly from 2015- 2017, showing business growth

Discount Impact

- Several products recorded losses despite strong sales volume
- Higher discounts reduced profit margins significantly

Geographic Insights

- California and New York contributed significantly to overall sales
- Some states had strong sales but weak profitability

Strategic Business Recommendation

Profitability Improvement & Product Strategy

- Reduce excessive discounting among low-margin products
- Review pricing strategies for underperforming categories
- Focus more on high-performing Technology products
- Re-evaluate poorly performing products sub-categories

Regional Growth

- Develop targeted strategies for low-performing states
- Invest more resources in high-performing regions like the West

Challenges Encountered During The Project

Data Challenge

- Discount column contained many zero values
- Profit column included negative values
- Data cleaning and validation were required

Technical Challenge

- Building DAX measures for time intelligence
- Designing an organized dashboard wireframe
- Configuring map visualizations correctly
- Ensuring visuals interacted properly with slicers

Dashboard Design Challenge

- Selecting appropriate visualizations
- Maintaining readability and consistency
- Balancing dashboard aesthetics with functionality

Conclusion

This Project successfully transformed raw Superstore sales data into a professional interactive dashboard using Microsoft Power BI

Project Achievement

- **Built interactive visual reports**
- **Developed meaningful KPIs**
- **Identified business performance trends**
- **Improved understanding of regional product profitability**
- **Demonstrated practical business intelligence skills**

Skills Demonstrated

- **Data Cleaning**
- **Data Visualization**
- **Business Intelligence(BI)**
- **DAX Calculations**
- **KPI Reporting**
- **Analytical Thinking**

Overall Conclusion

This analysis provides stakeholders with clear and interactive way to monitor business performance and make data-driven decisions effectively.
